

JKADAMS.COM

A three-panel sequence showing the application and use of JK Adams product on a wooden cutting board. The first panel shows a hand pouring the product from a bottle onto the board. The second panel shows a hand using a white cloth to spread the product. The third panel shows a hand using a white cloth to buff the surface. A large white arrow points upwards from the bottom right of the third panel towards the main title.

PRODUCT CARE + USE

FINE WOODWORKERS SINCE 1944
CUTTING BOARDS, WOOD PRODUCTS + KITCHEN ITEMS

STANDARD CARE + USE

Wood is an incredible natural material that expands and contracts with moisture and humidity. **Regular regimented care** of this product will protect it for years to come.

Handwash with warm, soapy water after each use and dry thoroughly with a towel. **Never soak or submerge in water**, run in a dishwasher, or use in a microwave. Placing hot pots or pans on your board can result in a lasting burn mark or impression.

Hardwoods are naturally anti-bacterial and anti-microbial

Apply your choice of JK Adams wood conditioner **once a week, with a lint-free cloth, to all surfaces**—including edges and ends—until the finish is established, and at any time the board feels dry.

If at any time the grain of your product becomes raised—causing a rough feeling—a light buffing in the affected area with 220+ grit sandpaper will smooth the finish. Reapply JK Adams wood conditioner after this process.

LIFETIME GUARANTEE ⬆

We stand by our product. Our goods come to you with a 100% satisfaction guarantee. If you find a defect with a JK Adams product, we will replace it. We're proud of our **lifetime guarantee**.

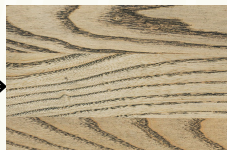

MAPLE

Maple is a forgiving hardwood. Grain variation is to be expected. It is recommended to use our conditioners at any time the product feels dry.

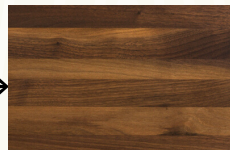

CHERRY

Cherry is a durable hardwood. It will darken with exposure to UV light and use. Use our conditioners at any time the product feels dry.

ASH

Ash is an open-grained hardwood with variations in tone and grain density. Use our conditioners at any time the product feels dry.

WALNUT

Walnut is a softer, more absorbent hardwood that will lighten with exposure to UV light. Use our conditioners at any time the product feels dry.
